## DETAILED ACTION

### *Claim Rejections - 35 U.S.C. §102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Brueckheimer et al. (WO 95/32596).

Brueckheimer et al. disclose, in Figs. 3 and 4, an E1, T1 V5 Interface (claimed a transmission system for transmitting digital signals, in TDM channels between an ET and LT), a multiplexed AA1 processor and an ATM Core (claimed means for converting TDM data into ATM cells). Further, Brueckheimer et al. describe, on page 2, lines 7-17, the narrowband services within that virtual circuit having permanently assigned timeslots whereby to retain timeslot sequence integrity throughout the adaptation process (claimed a means for allocating a virtual ATM channel to each time-division multiples channel). Brueckheimer et al., on page 5, lines 9-15, describe that the cell disassembly process then checks for phase synchronism between egress and ingress function (as in claim 4). See page 5, line 25 - page 6, line 8.

### *Response to Arguments*

3. Applicant's arguments with respect to claim 1-4 have been considered but are moot in view of the new ground(s) of rejection.

*Conclusion*
